

# SENSe Program

**SENSe is the Study of the Effectiveness of Neurorehabilitation on Sensation**

**Are you experiencing any sensory change after your stroke?**

**Are you wanting to improve how you use your hands in daily activities?**

**Join us for our SENSe program!**

SENSe therapy improves sensation by making the most of your brain's ability to learn and adapt to new skills.

Our SENSe program is suitable for anyone whose sensation has changed after a stroke, at any age. It is proven to be effective even many years after a stroke.

NeuroRehab's **SENSe program** runs from our **Deer Park** and **Bulleen** clinics. You will be seen by a SENSe trained therapist twice weekly for 8 weeks.
